

bs-Mix Color:

32 bpc compatible effect. Mixes solid color into image using various blending modes. With combination of “Set Matte” or “bs-Smart Set Matte” – possibility to use data from another layer to determine alpha used for mixing the solid.

1) Use Current Matte for Input:

Mix the input color using only the area defined by current matte of the layer. Pixels with Alpha “0” will not be affected.

2) Set Full Output Matte:

Sets output matte to 100%.

3) Color:

Defines color to be mixed.

4) Blending Mode:

Blending mode to be used for mixing color defined by “Color” controller.

5) Opacity:

Opacity of input color
