DESCRIPTION

Ash is a syntax highlighter for After Effects text layers.
Ash will take a text layer of **REAL** code, and highlight it to look as if it was written in a code editor.

A colour controller will be added to each text layer,
giving you a single place to manage each colours.

LANGUAGE

Ash can try to autodetect language, but if it doesn't work use this to specify the language.

THEME

Choose the colour theme to use. Once a layer is processed, you can change the dropdown to update colours without re-processing text.

The buttons below will save or delete the current theme.
Any themes in `/ScriptUI Panels/(ash)/ash_themes/` will also appear here,
even if nested in other folders.

HIGHLIGHT

Highlight text layers of code and add the Ash colour control effect.

CLEAR

Remove Ash effect and the colourizing treatment.

OPTIONS

Languages

Customize the programming languages that appear in the dropdown.

"Heavy" Threshold

The point at which you will be prompted to confirm running Ash,
before it processes your layer

Enable Logging

Whether to save a small txt file log for debugging purposes.
Please enable this if you're having issues with Ash!

INSTALLATION

PC

Copy **ash_syntax-highlighter.jsx** and the **(ash)** folder to:

C:\Program Files\Adobe\Adobe After Effects CC 2020\Support Files\Scripts\ScriptUI Panels\

Mac

Mount the DMG, and copy **ash_syntax-highlighter.jsx** and the **(ash)** folder to:

/Applications/Adobe After Effects CC 2020/Scripts/ScriptUI Panels/

CHANGELOG

- v1.0.3**
2020/04/10
 - Add support for MacOS Catalina
- v1.0.2**
2019/10/22
 - Fixes a bug with ASH not running on MacOS
- v1.0.1**
2017/07/06
 - Fixes a bug with ASH not highlighting on MacOS
- v1.0.0**
2017/06/26
 - Initial release!

LICENSES

ASH uses the Pygments syntax highlighting engine.
Pygments is licensed under the BSD license, below.
