# METTLE SKYBOX 360/VR Transitions

## Mobius Zoom, Iris Wipe, Gradient Wipe, Random Blocks

“SkyBox 360/VR Transitions” introduces seamless 360 transitions into Adobe Premiere Pro. It’s a pack of 4 separate Transitions: Mobius Zoom, Random Blocks, Gradient Wipe and Iris Wipe. Each transition has multiple features to customize and create an endless variety, designed specifically for 360 footage.

**Supported hosts:** Premiere Pro CS6 or later

.....

### Installation

Use the Mettle Product installer to install the SkyBox 360/VR Transitions. Please make sure that you have not renamed or moved your Adobe product folders from their default install locations. This will cause installer errors.

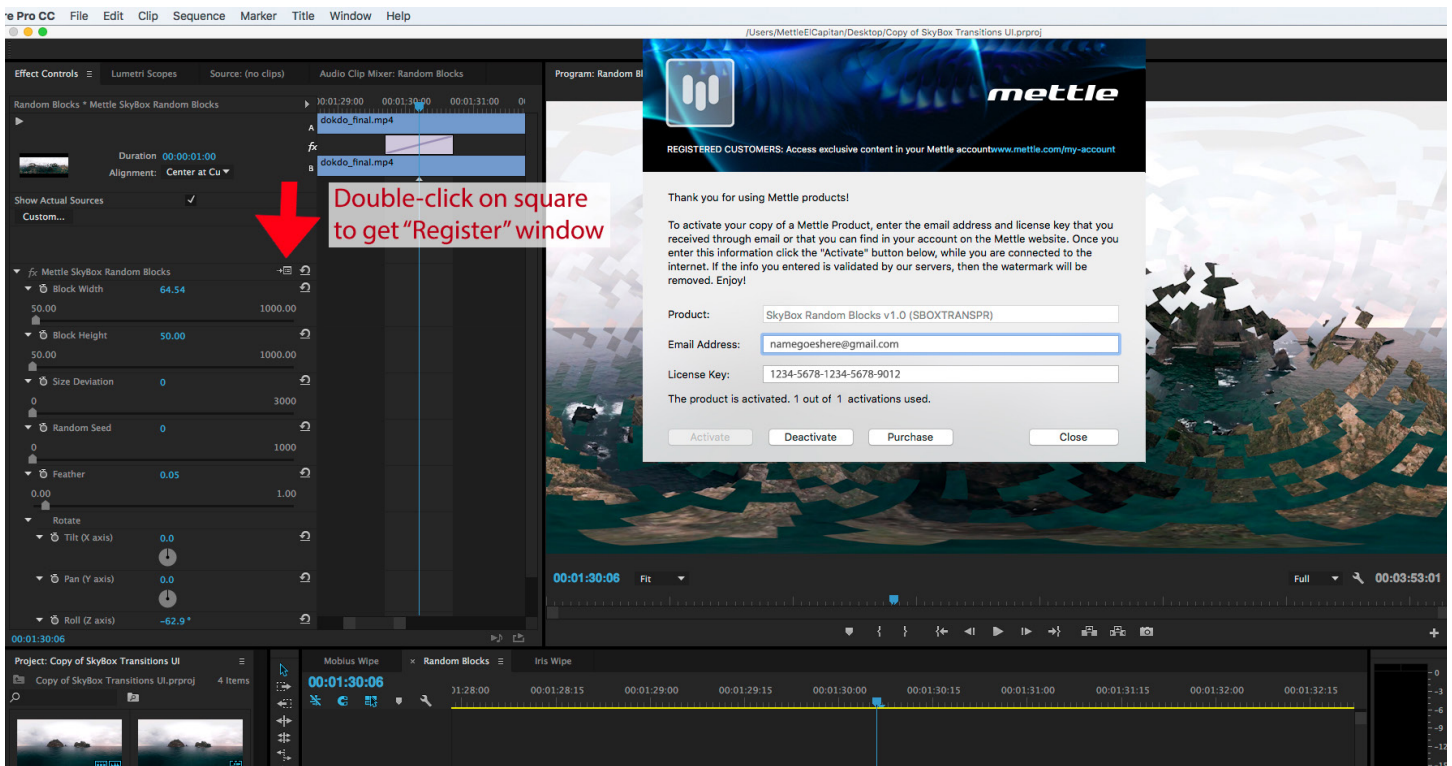

.....

### How To Register

Enter the exact license info you received when you purchased SkyBox 360/VR Transitions, as it was sent by email or as it appears in your account on our site. You can enter this info in any of the SkyBox 360/VR Transitions “Register Windows”. Enter the license info once for all 4 Transitions to be active.

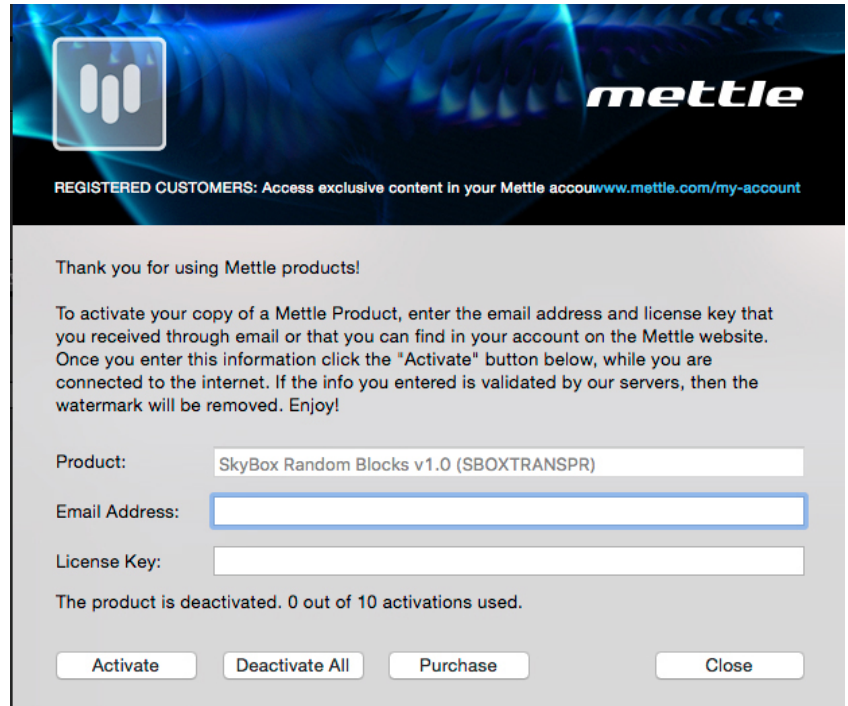

To make sure the information is entered properly, Mouse -> Right Click -> Copy the info we send you for Username and License key, then Mouse -> Right Click -> Paste into the appropriate fields in the Register Window. If this is not working for you then take a screen capture of the Register Window and send that to us via our Technical Support form on our site.

.....

.....

## How To Deactivate Your license Key On One Computer And Activate On Another

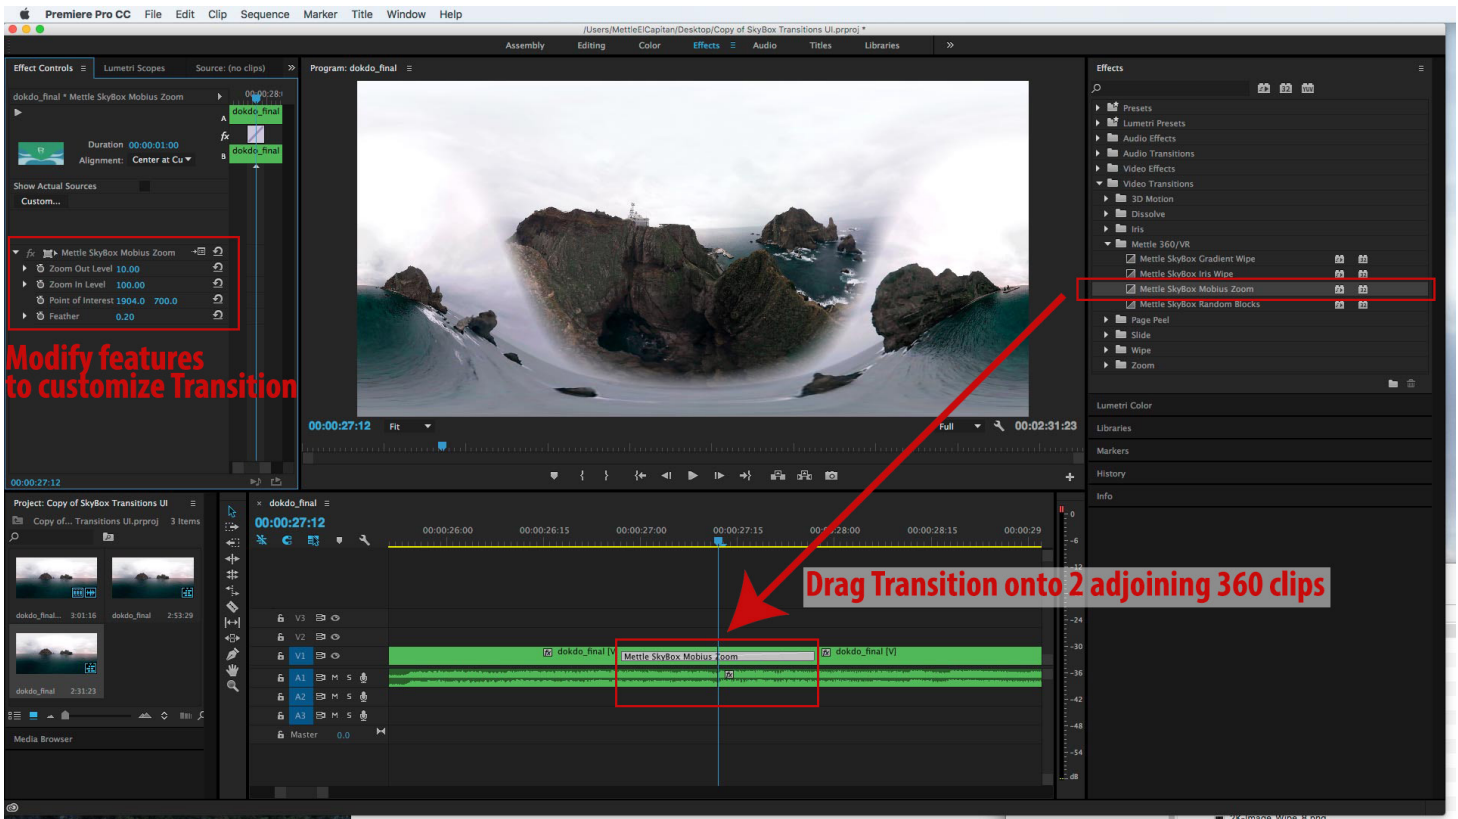

Simply click on "Deactivate All" in the Register Window on one computer, then enter your info on the other computer in the Register Window and then click on Activate.

# SkyBox 360/VR Transitions - For Adobe Premiere Pro

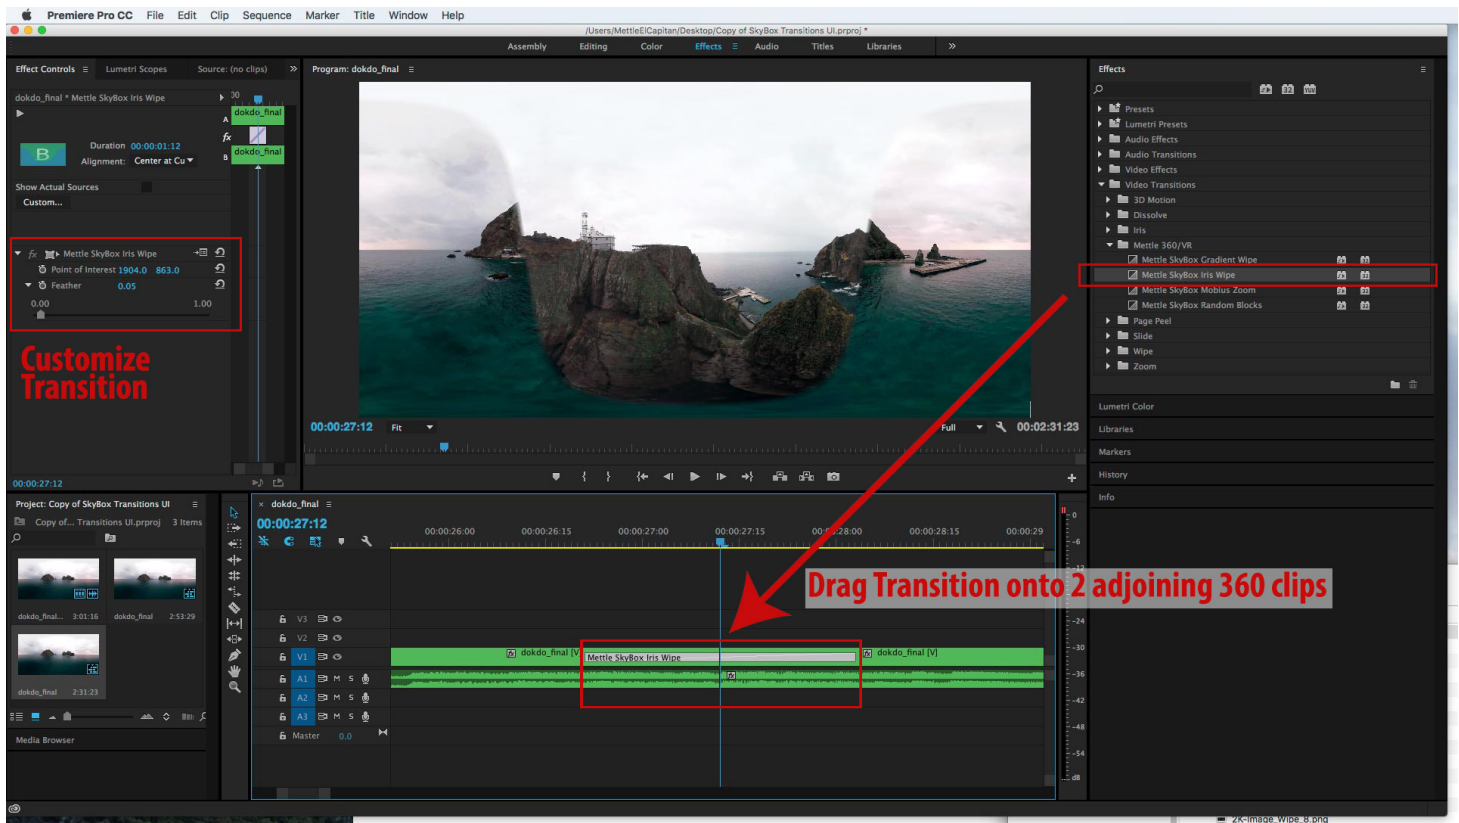

## Introduction

SkyBox 360/VR Transitions can be applied directly on two adjoining clips of Equirectangular footage on your timeline in Premiere Pro. Designed specifically for 360 footage, the transitions properly distort the transitions to appear correctly in 360 format, with many customisable features. We support Equirectangular format, mono 2:1 or Stereo 1:1 over-under.

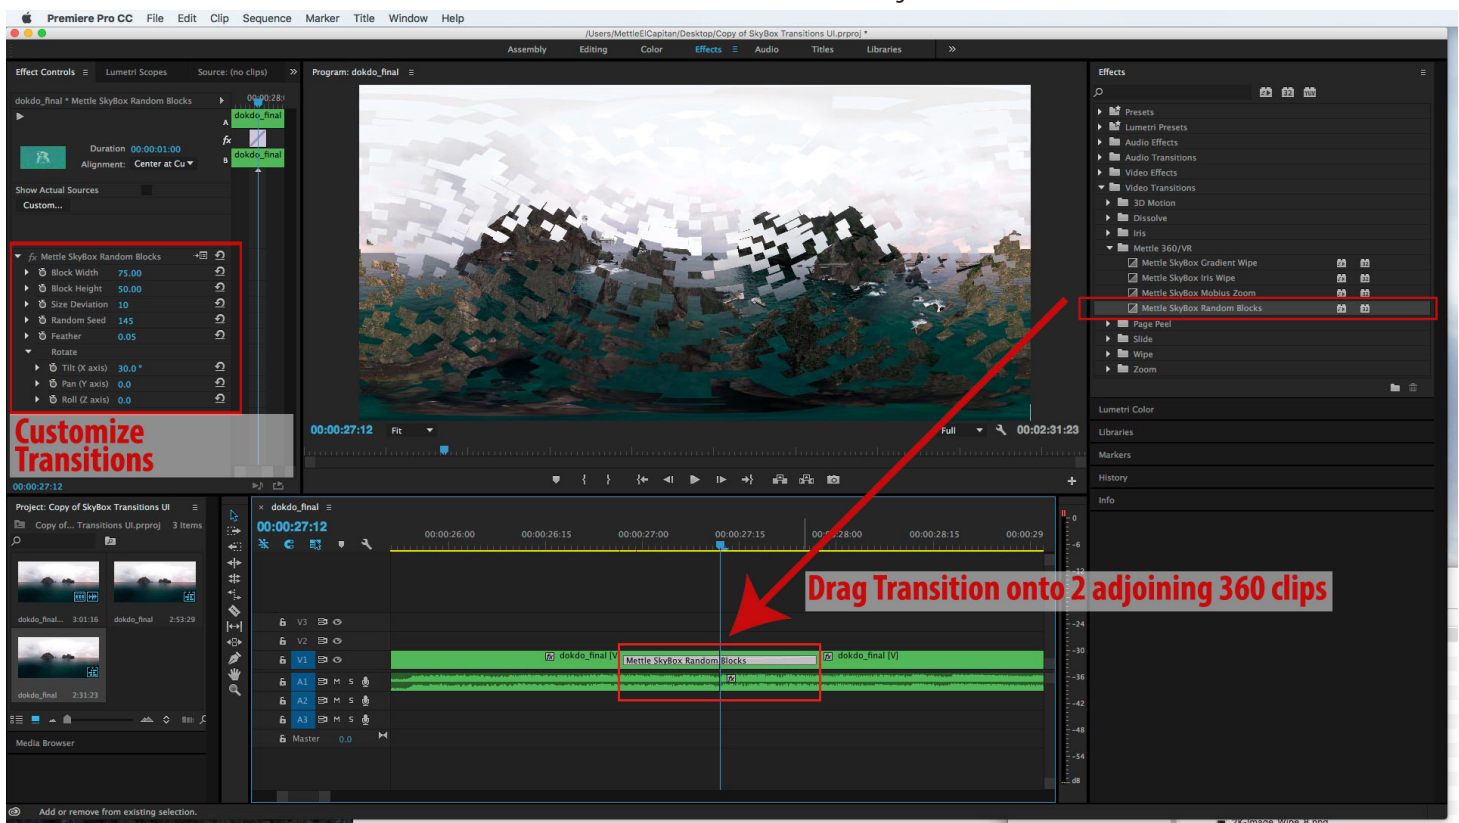

## SkyBox 360/VR Transitions - Mobius Zoom

- Change Point of Interest, region of Equirectangular footage where transition originates
- Vary "Zoom In" and "Zoom Out" level of footage
- Feather control for Transition edges

## SkyBox 360/VR Transitions - Iris Wipe

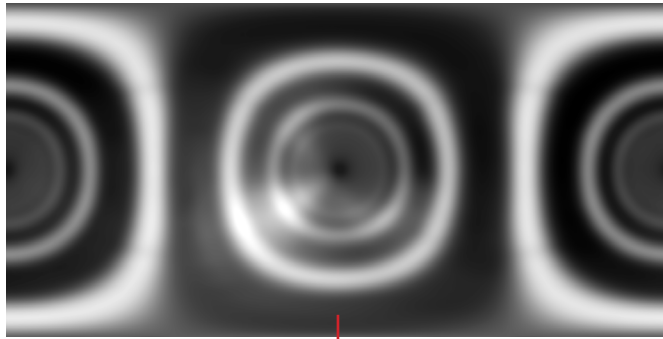

- Change Point of Interest, region of Equirectangular footage where transition originates
- Feather control for Transition edges

## SkyBox 360/VR Transitions - Random Blocks

- Adjust Block Width and Block Height
- Adjust Random Seed
- Rotate on the X, Y and Z
- Size Deviation
- Feather control for Transition edges

Equirectangular image was uploaded through "Custom" button, and applied as a Transition in the example below.

A screenshot of the Adobe Premiere Pro interface. The main preview window shows a landscape video with a circular gradient wipe transition applied. The Effect Controls panel on the left shows the 'Mettle SkyBox Gradient Wipe' effect with various parameters like Feather, Rotate, and Pan. A red arrow points to the 'Custom...' button in the 'Show Actual Sources' section. The Effects panel on the right shows the 'Mettle SkyBox Gradient Wipe' effect selected. The timeline at the bottom shows two adjacent video clips with the transition applied between them. A red arrow points to the transition in the timeline with the text 'Drag Transition onto 2 adjoining 360 clips'. A red circle in the preview window points to the transition effect.

### SkyBox 360/VR Transitions - Gradient Wipe

- Gradient wipe can be inverted
- Rotate Transition on the X, Y, and Z axis.
- Feather control
- Click on "Custom" to import an Equirectangular image to use as a transition.
