

Bendio is a plug-in for Adobe After Effects that bends layers, with the ability to attach other layers to the bend. It's compatible with After Effects version CC2018 and later.

INSTALLATION

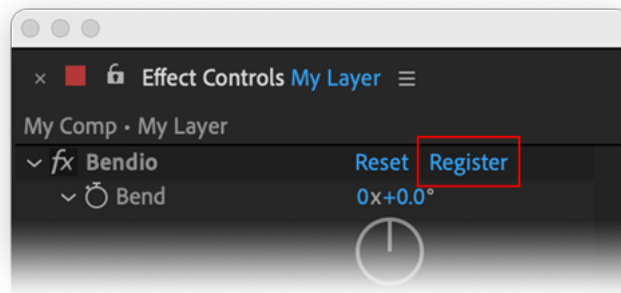

Quit After Effects if it is running. Unpack the .zip archive you downloaded from aescripts.com and move the relevant file for your OS to your plug-ins folder, which is located here:

Windows: Program Files\Adobe\Common\Plug-ins\7.0\MediaCore\

Mac OS: /Library/Application Support/Adobe/Common/Plug-ins/7.0/MediaCore/

Open After Effects. Open a composition, select a layer, navigate to the menu bar and click **Effect > Animatable > Bendio** to apply the effect to your layer. If you can't already see it, Press F3 to open your Effect Controls Panel.

Bendio will superimpose a watermark on layers until it is licensed. When you purchase a license, you'll get an email with a license code. Copy the entire code and paste it in to the registration window in After Effects. The registration window opens when you click **Register** at the top of the Bendio effect.

HOW DOES IT WORK?

You can watch a quick video tutorial, [here](#). The Bendio User Guide is [here](#).

MORE GOOD STUFF

Check out our freebies including **Arc Checker**, **Toon Flare** and more at animatable.co. If character animation is your thing, we'd love to welcome you to our new **Discord server** where you can get help, advice, and access to new tools.

Thanks!

Steve
