

Installation:

Way A.

The easiest way to install and license is by using the aescrpts + aeplugins manager.
(<https://aescrpts.com/learn/aescrpts-aeplugins-manager-app/>)

To install a trial you can select 'Add Trial' from the 'Account' menu

Way B.

1. Copy the file "Fade It! v1.0.0.jsx" into the following folder:

Windows: C:\Program Files\Adobe\Adobe After Effects C[xx]\-Support Files\Scripts\ScriptUI Panels

Mac: /Applications/After Effects C[xx]/Scripts/ScriptUI Panels

2. You should allow scripts to write files in After Effects:

Windows: Edit > Preferences > General > Allow Scripts to Write Files and Access Network

Mac: After Effects > Settings > Scripting and Expressions > Allow Scripts to Write Files and Access Network

Introducing “Fade It!”:

Are you sick of the time-killing repetitive task of keyframing Opacity to make fade in and fade out transitions?
Try out “Fade it!”

A tool for applying fade transitions to layers.
Packed with variety of fade types (i.e., linear, ease, blink, and crazy) to provide multiple options.

You can easily adjust the duration of transitions by the markers added to layers.

Choose your fade type and “Fade It!” will do the rest with one click, saving you lots of time!

Why does “Fade It!” exist?

I spent a lot of time keyframing Opacity to make fade in and fade out transitions for every project and Ae task I worked on.

Eventually, I started thinking, "how can I automate this process and have a variety of options to adjust fade transition?" And that's how “Fade It!” was born.

Using “Fade It!” I've left many hours of keyframing opacity of layers for fade transition!

Who is “Fade It!” for?

“Fade It!” is for anyone who uses After Effects and wants to work more efficiently with fading layers.

It saves a good amount of time specially for those designers who work on making courses, tutorials, demos, and more.

FADE IT!
