

Swift Slides

Thank you for downloading Swift Slides!

If you need support or have an issue, please open a support ticket through <https://aescrpts.com/contact/>

Installation

Recommended - Use the [aescrpts + aeplugins manager](#) to install the Swift Slides extension.

Alternatively use the [aescrpts ZXP installer](#) to install the extension.

Swift Slides User Instructions

1. Select the images and audio you would like to adjust in the new sequence.
2. Customise the settings according to your preferences.
3. Click the 'Swift Slides' button!

Settings details

Fit to selected music – The selected slides will be fit to the duration of the selected audio.

Custom Duration (seconds) – Instead of fitting the slides to the selected music you can use this to set a custom duration for the slides in seconds.

Edit videos (shortens only) – Edit the videos to match the slide length when possible. Video clips will not be lengthened.

Randomise Slide Order – Randomises the slide order.

Fit to height – Fits the images to the sequence height.

Fit to width – Fits the images to the sequence width.

Fill screen – Fill the entire screen with the image.

No scale changes – Images will not be scaled to fit.

Random Zoom (%) – A random amount of zoom (scale) animation will be applied (as keyframes) ranging from zero percent to +/- the percentage value specified.

Random Pan (%) - A random amount of pan (position) will be applied (as keyframes) ranging from zero percent to +/- the percentage value specified.

Transition Duration (frames) – The frame duration to apply to the selected transitions.

Select Multiple Transitions – Click to select a transition or use 'CTRL + click' to select the multiple transitions for the slides. Transitions will be placed randomly between slides.
