

The easiest way to install and license is by using the aescrpts + aeplugins manager (<https://aescrpts.com/learn/aescrpts-aeplugins-manager-app/>) To install a trial you can select 'Add Trial' from the 'Account' menu

## Installing The Script:

Once it's downloaded, place the "Counter Pro.jsx" file into the ScriptUI Panels folder located here:

**\*\*Mac OS:\*\*** Applications/Adobe After Effects <version>/Scripts

**\*\*Windows:\*\*** Program Files\Adobe\Adobe After Effects <version>\Support Files\Scripts

If the ScriptUI Panels folder doesn't exist, create a folder named "ScriptUI Panels" and paste the copied files into it.

## Write Files and Access Network

For Mac OS, navigate to After Effects > Preferences > General. For Windows, go to Edit > Preferences > General.

**To avoid errors, "Counter Pro" requires access to write files and the network. Ensure this by going to:**

And make sure "Allow Scripts to Write Files and Access Network" is selected.

## Load the Script

Scripts are found in two locations in After Effects. The GUI can be loaded from either location but is only dockable if loaded from the "Window" submenu. Follow the steps above and go to "Window" -> "Counter Pro" to load the script. Alternatively, run the script from "File" -> "Scripts" -> "Run Script".
