

# 0. Setup:

- The easiest way to install is by using the aescrpts + aeplugins manager

<https://aescrpts.com/learn/aescrpts-aeplugins-manager-app/>

- You can also install using the zxp installer.

<https://aescrpts.com/learn/zxp-installer/>

- In After Effects, enable 'Allow Scripts to Write Files and Access Network' in Edit > Preferences > Scripting and Expressions

# 1. Configuration:

## 1.1 Go to Window > Extensions > FontShaper

## 1.2 GoogleApi:

1. Go to: [https://developers.google.com/fonts/docs/developer\\_api#APIKey](https://developers.google.com/fonts/docs/developer_api#APIKey).
2. Click Get key:

3. Create new project and copy generated key.

4. Paste **api key** and restart extension:

## 1.3 Local Library:

- Paste your local folder path into 'Local Library Path'.

! **Make sure to use "/"**

! **Extension support Folders only 1 level deep.** Don't create nested folders.

## 1.4 Temporary Path:

Select preferable path for files export.

For custom path, provide path with "/" (ex. C:/Shapes)

Restart extension.

## 3. Known issues:

## 3.1 Unsupported fonts:

Formats: woff2, eot, svg

Extremely detailed fonts

## 3.2 Fix holes/overlapping:

- Change fill rule.

- Change size. Certain sizes have no holes.

- Remove manually. Change hole path mode to **subtract**.

## 4. Paths for Photoshop

If you want to work in **Photoshop** with font paths check out our tool: UniPort on [aescripts.com](https://aescripts.com).

## 5. Version

Made using CEP9. Requires CC 2018+ version of After Effects (15+).

## Apple Silicon Machines must run Photoshop under Rosetta Mode

## 6. Support:

Use this thread to ask all questions related to this extension.
