ANIMOGRAPHY.

Important Information

In order to properly use our animated typefaces, you need to install Font Manager or Animography Controller.

Font Manager is a script that will help you with typesetting, creating controllers, creating your own animated typefaces, and much more. It can read animated typefaces in both .aep and .jsx format. Find it at: aescripts.com/font-manager/

Animography Controller is a free script with just one button that will simply create a controller for the characters you have selected. It only works with animated typefaces in .aep format, and only on characters that have not been linked to a controller already. Pick it up at: aescripts.com/animography-controller/

You can find your license codes in the 'My Downloads & Licenses' section of your user account. aescripts.com/downloadable/customer/products/

Installing animated typefaces with .jsx format

Step 01:   Go to: Adobe After Effects [version]/Scripts/Script UI Panels/Font Manager Library

Step 02:   Drag the contents of the JSX folder (TypefaceName.jsxbin & the folder TypefaceName) to the Font Manager Library folder.

Step 03:   Hit the refresh button in Font Manager. Et voila! The animated typefaces can now be found in the dropdown menu of Font Manager.

Step 04:   Select the typeface from the dropdown menu, and click the little info-button next to it. This will open up a panel where you can enter your license key to unlock all characters.

Without a valid license key, you will only have access to the characters A, B, C. All other characters will be replaced with questionmarks.
