

Hello, welcome to the Zujal Trial.

In this **Trial** you only have **one letter** the **After Effects project** along with a 3 letter(A, B, C) preview using **JSX typeface** functionality.

To use the **JSX typeface version you have download Font Manager** (<http://aescripts.com/font-manager>) if you don't already have it. Then place the two items inside of the **Zujal_JSX** folder into: "After Effects [version]/Scripts/Script UI Panels/Font Manager Library".

Below you will find a list of included items in the full version along with a brief description.

Enjoy!

- **Zujal_(Characteristic).aep** -
Use this After Effects file if you are not using any 3rd party scripts or using the Characteristic script(<http://aescripts.com/characteristic>)
 - Use the "Controls" composition to change the colors & enable/disable the highlights option.
- **Zujal_(Font Manager).aep** -
Use this After Effects file if you are using the 3rd party script called Font Manager(<http://aescripts.com/font-manager>)
- **Zujal_JSX Folder** -
Inside is a .jsxbin which is the Zujal Animated Typeface in a script format which would be used in conjunction with Font Manager.
 - *** The two files found inside this folder will need to be moved here: After Effects [version]/Script UI Panels/Font Manager Library
- **README** -
The file you are reading right now.
