

Installation Instructions

Please install "Duplicate It!" using "aescrpts + aeplugins ZXP installer" as described here.

IMPORTANT: We guarantee that all functions work in the CC 2020.

In the CC 2019 version all features work as well, but we can not guarantee full compatibility because we need to work on constant updates from Adobe.

1. Make sure to quit Premiere Pro if it is running.
2. Download and install aescrpts + aeplugins ZXP installer
<http://aescrpts.com/learn/zxp-installer/>
3. Start aescrpts + aeplugins ZXP installer and drag the .zxp file of "Duplicate It!" onto the installer window
4. In case of any issues please feel free to raise a support ticket at
https://aescrpts.com/contact/?direct=1&product_id=1568
5. If you now start Premiere Pro, "Duplicate It" is available in the menu Window->Extensions-> Duplicate It

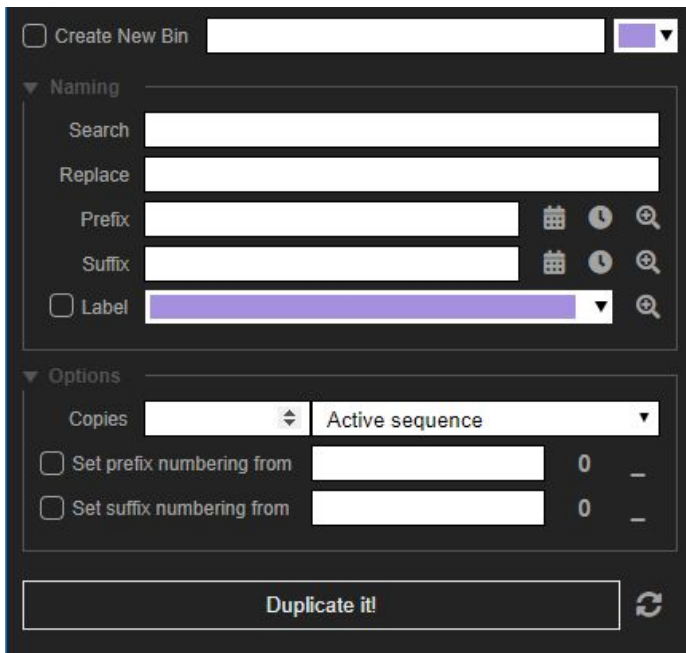

How to use it?

See tutorial here: <https://youtu.be/QyKjWuaGIG8>

The extension has two interface modes - minimized and with expanded tabs.

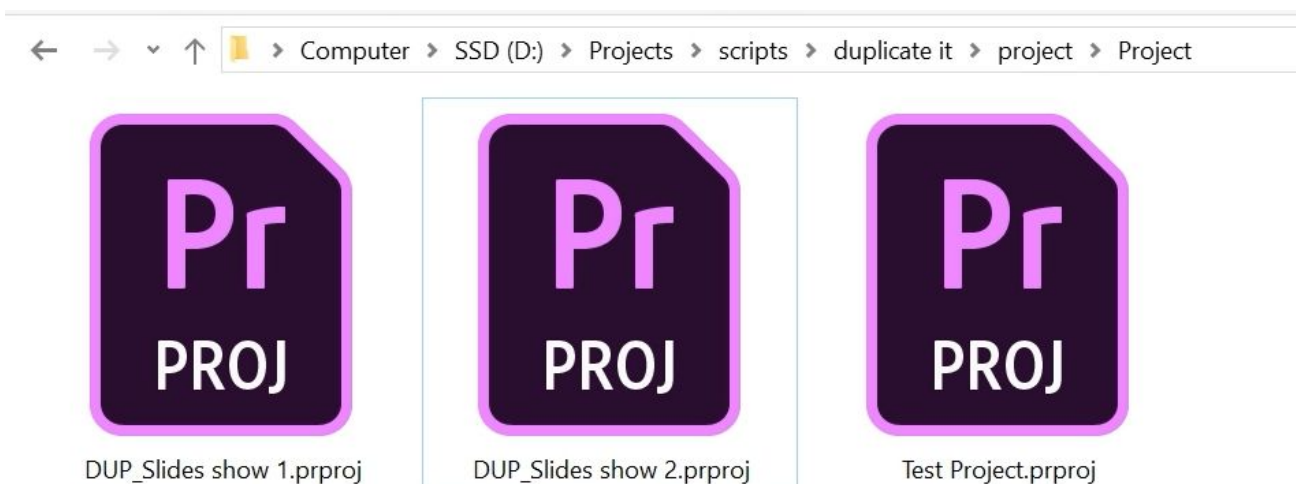

- If you need to duplicate an active sequence quickly, you can use a minimalistic interface.

- Expand the interface if you need rename functions and set the number of copies.

When you duplicate a sequence, a new project is created in the folder with the current project. He gets a name "DUP_*DuplicatedSequenceName*".

You can delete this project after creating a duplicate. If you duplicate a new sequence with the same name, it will overwrite this project.

Important - you can duplicate only one sequence at a time (active or one selected). But you can create many duplicates! After duplicating a sequence, you can duplicate another one.

Let's look at the functions:

- **Create New Bin** - create a new bin and put the duplicated items into.

You can create bin with your custom label color.

- **Search** - enter text for searching across Project Item names
- **Replace** - replace Project Item names with this line
- **Prefix** - add prefix to item names

-  - add current date to item names

-  - add current time to item names

-  - add naming ONLY for search results

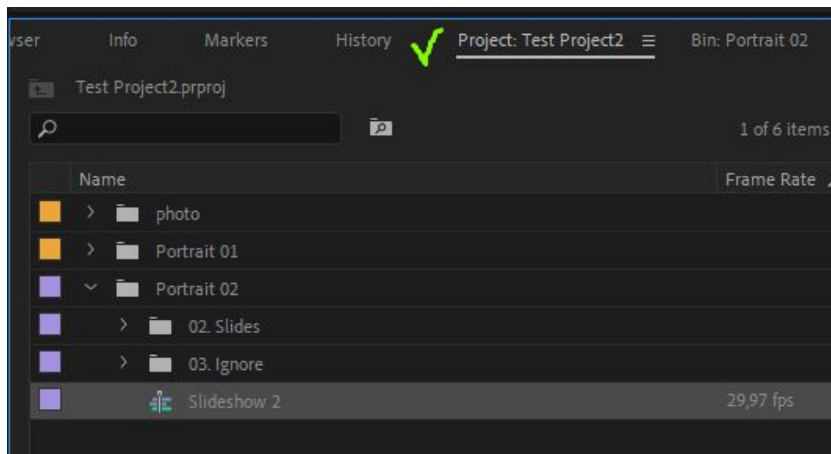

- **Suffix**- add suffix to item names
- **Label** - change label colors for imported items

And  in this case change label colors ONLY for search results

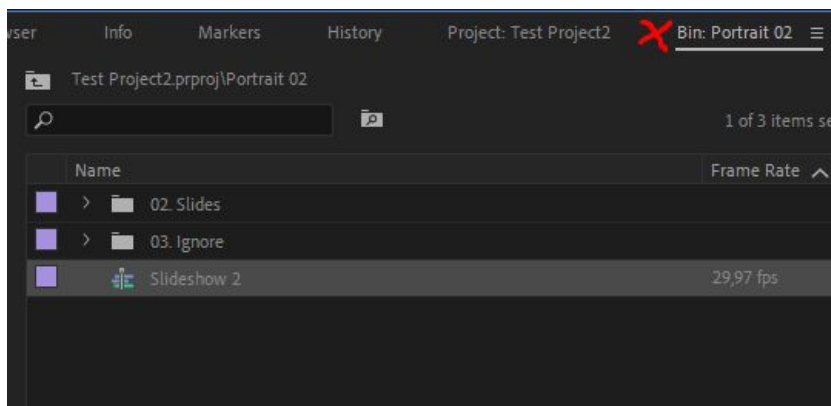

- **Copies** - Sequences duplicates number
- **Active or Selected sequence** - sequence duplicate type. **“Active Sequence”** duplicate and put project items in the active Project window.
-  - add "0" at the beginning of numbering
- **Set Prefix/Suffix numbering from** - write from which number the numbering will begin.
-  - add underscore after (or before for suffix) the numbering
-  - clear all input lines

Important: Duplication of the selected sequence only works in the “Project” window. Be careful, because sometimes you can accidentally open the "Bin" window or you really work in it - the extension does not see the selection in this window.

“Project” window

“Bin” window

Limits in Trial Version:

1. You can duplicate one sequence only once. After that, it is blocked for duplication, and you need to choose another sequence for duplication (and it cannot be the duplicate)
2. You can duplicate only 15 times. After that, the script will block the possibility of duplication.
3. You can make a maximum of 3 copies of the sequence.
