          :
Version   |   Features / Fixes
----------+----------------------------------------------------------------------------------------------------
          |
1.5.1     | . Align - a new function that finds the nearest values of the current block dimensions
          |    to create (if possible) blocks of the same size throughout the image
          | . Fix of crash for unregistered version with a composition height over 4096 pixels (watermark bug)
          | . Fix of Exclusive Mode in Time Shift feature — now with no effect when the feature is disabled
          | . Fix for scaling affected by a difference between the resolution of the adjustment layer and the frame
          | . After Effects SDK May 2023
          | . Stapled macOS build (in addition to being signed and notarized)
          |
1.5.0     | . Time Shift (new section) - allows shifting of blocks in time
          | . Mask Filter (new section) - controls occurrence of swap operation only in certain areas
          | . Composite on Original - allows outputting only changed areas of the image
          | . Block width and height size limit extended to 4096
          | . Universal macOS binary (Apple silicon support) for Premiere Pro and After Effects (beta)
          | . Multi-frame rendering support
          | . Code signed Windows binary and SatoriFX branding
          | . Aescripts framework v4.0.7 - improved stability of license checks
          |
          |
1.0.0     | . initial release
          |
